Fixed Site Establishment Food Service Renewal Risk Factor Flowchart Christian County Health Department

*Existing establishments with an established history of failing to effectively control risks may be classified at a higher risk level.

Definition of terms

At-risk population – immunocompromised individuals such as the elderly, young children under age four and pregnant women are served, where these individuals compose the majority of the consuming population.

Category I facility – a food establishment that presents a high relative risk of causing food-borne illness, based on the large number of food handling operations typically implicated in food-borne outbreaks and/or the type of population served by the facility.

Category II facility – a food establishment that presents a medium relative risk of causing foodborne illness, based upon few food handling operations typically implicated in food-borne illness outbreaks.

Category III facility – a food establishment that presents a low relative risk of causing food-borne illness, based upon few or no food handling operations typically implicated in food-borne illness outbreaks.

Commissary: Food establishment or approved place in which food, containers, supplies, single service articles, single use articles are kept, prepared, packaged or stored for off-site service.

Extensive preparation – Processes that include the cooking, hot and cold holding, and reheating of time/temperature control for safety foods.

Food(s) – A raw, cooked, or processed edible substance, ice, beverage, or ingredient used or intended for use or for sale in whole or in part for human consumption, or chewing gum.

Food contact surface(s) – Includes a surface of equipment or a utensil with which food normally comes into contact; or a surface of equipment or a utensil from which food may drain, drip, or splash into a food, or onto a surface normally in contact with food.

PHF – Potentially hazardous food(s). Applies to foods requiring time or temperature controls to prevent the growth of harmful or toxin forming pathogens. Also referred to as time/temperature control for safety (TCS) foods.

Prepackaged – Bottled, canned, cartoned, bagged, or wrapped, whether packaged in a food establishment or a food processing plant. Prepackaged does not include wrapped or placed in a carry-out container to protect the food during service or delivery to the consumer, by a food employee, upon consumer request.

Reduced Oxygen Packaging (ROP) – The reduction of the amount of oxygen in a package by removing oxygen; displacing oxygen and replacing it with another gas or combination of gases; or otherwise controlling the oxygen content to a level below that normally found in the atmosphere (approximately 21% at sea level); and a process as specified above that involves a food for which the hazards *Clostridium botulinum* or *Listeria monocytogenes* require control in the final packaged form. Includes vacuum, modified atmosphere, controlled atmosphere, cook-chill and sous vide packaging.

Risk factor – A level of risk assigned to a food service establishment based upon the types of food being offered, level of preparation, population served and associated risk of transmitting foodborne illness. In Christian County, IL, risk factors are assigned a Roman numeral of either I (high risk), II (medium risk), or III (low risk).

TCS – Time/temperature control for safety. Applies to foods requiring time or temperature controls to prevent the growth of harmful or toxin forming pathogens. Formerly referred to as potentially hazardous foods (PHF).
